A Simple Step by Step Lamp Designing and Construction

How This System Works (Getting Started)

- 1. Follow the directions "How to use MagicStrips™" in the instructions to PROPERLY PREPARE and APPLY the MagicStrips™.
- 2. In this basic lamp drawing method you will be making a lamp with the same deign repeats at the SectionalForm™ you have selected.

<u>Note:</u> Most of the Tiffany lamps and other antique lamps were usually designed with either 3 or 4 repeats, because generally that is all that can be viewed from any angle.

- 3. Sketch one complete repeat of your design. Draw the design and trace your patterns on **one** six-repeat SectionalForm[™] and construct a six-repeated design lamp shade or draw the design and trace the patterns covering **two** six-repeated SectionalForms[™] for a three-repeat lamp design.
- 4. Carefully trace off each BRIDGING PIECE (a pattern piece that extends from one repeat to the other) and match them up accurately on the other side of the repeat. Use the blue grid lines as a guide for proper alignment.

 Note: To match the sides of the new repeated design (like wall paper) you will need another sectional form of the same series. Temporarily attach it to the first form with masking tape.
- 5. Trace off the other pattern pieces and finish your lamp per the instructions. **Note:** For complete instructions see the enclosed instruction manual.

DISPLAYING YOUR LAMP

This shade was designed to be a table lamp viewed from above or used as a hanging swag lamp up to 13" deep to be viewed from below. The suggested lamp base height is 17"-26" depending on the depth of your lamp shade.
